Frost-Proof Cabbage Plants

Yonges Island, S.C.

GERATY'S FROST-PROOF CABBAGE PLANTS

Guarantee Early Crops and Doubled Profits

All of Geraty's Cabbage Plants are grown on Yonges Island, off the coast of South Carolina. Constant low temperatures in early spring, coupled with difficult growing conditions, give the plants great resistance to cold and bad weather.

We guarantee our plants to live at any temperature exceeding 20 degrees above zero. Many times plants of ours have been exposed to 10 degrees above zero (more than 20 degrees below freezing) and have entirely escaped injury.

YOU GAIN THREE WEEKS

Vegetables sold early in the season bring many times the price of those marketed several weeks later. That's why Geraty's Frost-proof Cabbage Plants are so profitable for the gardener; they produce full-grown heads three weeks before plants which have been home-grown. We have been growing Cabbage Plants for more than fifty years, and because of our careful selection of seed you frequently get

Guarantee

If the increased yield of beaded Cabbage from our plants, compared with the yield from cheaper plants of same varieties sold by others, planted at the same time and grown under the same conditions, is not worth more than the difference in cost, we will refund the entire purchase price. There is over a half century's reputation of honest dealing behind this guarantee.

TWICE AS MUCH CABBAGE PER ACRE

We know how to produce good plants; you'll find no runts or weaklings among those you purchase; practically every one makes good. You'll easily get from 6 to 10 tons of Cabbage for each acre you plant.

When the plants come to you they look stunted and wilted, but don't bother about the appearance; plant all of them just the same. Place them in the ground a month before you'd set out home-grown plants, and then forget about them. Order now and be sure of Cabbage profits this season. Our guarantee protects you perfectly.

We can supply the best commercial varieties: Early Jersey Wakefield, Charleston Large Type Wakefield, Copenhagen Market, Succession and Early Flat Dutch from December 1 to May 1.

Prices by parcel post, postpaid. In lots of 100, 200, 300, or 400 plants, at 50 cts. per 100 plants; 500 plants for \$1.60; 1,000 or more at \$3 per 1,000 plants.

Orders are filled by the 100, not 250 or 350. These prices are for even quantities of one variety to package; if you ordered 200 of one variety and 300 of another variety you would pay at the 100 rate.

Prices by express, buyer paying express charges. In lots of 1,000 to 3,000 plants at \$2 per 1,000; 5,000 or more at \$1.50 per 1,000. Plants packed for express shipment, 1,000 or 2,000 plants of a variety to package. They weigh about 25 pounds per thousand plants, packed for shipment. Terms cash with order. No plants shipped C. O. D.

WM. C. GERATY COMPANY

Yonges Island, South Carolina

Our "Stunted" Tomato Plants

These plants are exactly the opposite to hothouse or frame-grown plants. They are grown in the open fields, where the soil is exceedingly poor. The early, cool temperatures permit only a slow growth, and the thin soil forces them to produce a thick cluster of roots. They are very hardy, extremely short-jointed, and quite free from disease.

When they are transplanted to good soil, they grow with a rush, but the short-joint characteristic remains with them. They produce much more fruit in proportion to size of bush than ordinary plants, and are also much earlier—their fruits are ripe when profits are good.

We can ship plants from early May to June 15. We must have all orders well in advance, as we plant just enough seed to fill our orders.

Varieties: Earliana, Jewel, Bonny Best, Red Rock and Stone.

Terms and prices are the same as for our Cabbage Plants. See page 1.

Porto Rico Sweet Potato Plants

Easily the best Sweet Potato in cultivation. Yields a heavy crop without much cultivation. One good harrowing just before the vines start to "jump" is enough for the season, as the rapid growth soon causes the leaves to shade the soil. Weeds and grasses are unable to make a start.

This is one of the easiest crops to grow, and it is frequently very profitable, as the original investment is low and the cultivation is next to nothing.

This special variety, also known as "Sugar Spud," has won an excellent reputation for flavor and keeping qualities; it is the most desirable sort for market or home cooking. Place your order early; we grow only enough plants to fill orders received, and late orders sometimes have to be cancelled. Shipping season May 1 to June 15.

Terms and prices are the same as for our Cabbage Plants. See page 1.

Extra-Hardy Onion Plants

Our Onion Plants are grown under the same conditions as our cabbage plants. Poor soil and low temperatures tend to develop big root clusters and make the plants extremely hardy. Just as soon as they're planted in good soil, the bunches of roots take hold and grow at a really marvelous rate.

You can put these specially grown plants in the ground just as soon as you'd ordinarily plant seed or sets. This early planting means that you'll get earlier crops of fully developed Onions, and it likewise means that the Onions will be larger, since the cool growing season is so much prolonged.

We offer Prizetaker and Bermuda—both of them excellent, and both sure to bring big prices. They develop great big bulbs that weigh frequently three to four pounds. The difference is largely in the shape, and you should select the sort your market demands. Shipping season December 1 to May 1.

Terms and prices are the same as for our Cabbage Plants. See page 1.
